Srdjan Kojic

AI & Agentic Engineering Lead · Frontend Tech Lead

Berlin, Germany · srdjan.m.kojic@gmail.com · linkedin.com/in/srkki · github.com/skojic · skojic.github.io/aem-eds-figma-to-code/agentic-workflow

PROFILE

Engineering lead who does both halves: eight years building enterprise web platforms in JavaScript and TypeScript, and two years designing the multi-agent AI infrastructure that ships production code alongside them. The AI engineering infrastructure I built is in daily use by teams at Merck KGaA and Celonis — an agent library, an orchestration layer with strict invocation rules, and LLM pipelines wired to Jira, Figma, Confluence and browser automation through Model Context Protocol. Delivery time on the Merck frontend workstream fell 60–70%. Before software, a decade running network infrastructure for a national pension fund. Eighteen years in technology, Fortune 500 delivery throughout. Adobe Certified Professional.

SKILLS

AI & Agentic Engineering Multi-agent orchestration · agentic AI · LLM pipelines · LLM APIs (OpenAI, Anthropic) · agent and skill design · explicit-invocation skill packs · Model Context Protocol (MCP) integrations — Jira, Figma, Confluence, browser · context engineering · model tiering · deterministic PASS/FAIL validation gates · model-agnostic pipeline design

AI-Assisted SDLC GitHub Copilot automated code review · GitHub Actions CI/CD · SonarQube quality and security gates · agentic code-review workflows

Frontend & Architecture JavaScript (vanilla, ES6+) · TypeScript · HTML5 · CSS3 · design tokens · design systems · frontend architecture · component architecture · state management · web performance · responsive and accessible UI

Frameworks & Platforms React · Vue.js · Angular · Node.js · Adobe Experience Manager (AEM) · Adobe Edge Delivery Services (EDS) · AEM Forms · MongoDB

Leadership & Delivery Technical leadership · architecture ownership · technical interviewing and hiring · onboarding process design · mentoring · code-review culture · quality standards · story-point estimation · scope and budget discussion · agile delivery

Client & Analytics Business analysis · requirements workshops · stakeholder management · Adobe Analytics data-layer architecture · event-driven tracking · personalisation at enterprise scale

PROFESSIONAL EXPERIENCE

Cognizant Netcentric — Berlin, Germany

08/2019 – present

Progressed from AEM Developer to Technical Lead and Agentic AI Orchestration Architect across UBS, Henkel, BAT, Celonis, AbbVie and Merck engagements.

Across engagements

- Created the technical interview process for frontend hires and ran the interviews.
- Led the design of the onboarding process across every company location, aligning it with local onboarders in each office.
- Spoke twice at the company's yearly summits — one talk is public: youtube.com/watch?v=dJejUVDl95o

Technical Lead | Agentic AI Orchestration Architect @ Merck KGaA — 01/2026 – present

- Designed the production multi-agent system now in daily use: an agent library with defined skills, an orchestration layer with strict invocation rules governing when each subagent runs, and pipelines coordinating them end to end.

- Built the Figma-to-Code agentic pipeline that cut development time 60–70% across markets, with deterministic source loading and PASS/FAIL browser validation so no values are invented.
- Led the frontend architecture for multi-market sites on Adobe Edge Delivery Services and AEM, and architected a 5-layer CSS design-token system spanning 1,000+ Figma tokens for a global healthcare design system.
- Architected the Adobe Analytics data layer and ran the client requirement workshops behind it.

Technical Lead | Agentic AI Architect @ Celonis — 03/2025 – 11/2025

- Took over a task-force team with vague procedures, duplicated code and review acting as a bottleneck, and delivered ahead of deadline.
- Built the agentic AI pipeline for automated code review and wrote the frontend quality standards it enforced, replacing case-by-case judgement with clear PASS/FAIL criteria.
- Moved quality feedback ahead of human review with SonarQube and GitHub Actions, so reviewers spent their time on design rather than hunting duplication.

Senior Frontend Developer @ BAT — 07/2024 – 03/2025

- Built the UI and interactions for a complex webshop serving the Japan and Canada markets.

Frontend Developer | MarTech Consultant @ Henkel — 01/2020 – 07/2024

- Built UI and interactions across multiple Henkel brands and markets over more than four years, and implemented an Adobe Analytics data-layer pipeline with event-driven granulation.
- Held the business analyst role alongside engineering: daily client contact, requirement workshops, story-point estimation, and scope and budget discussion with project management.

Senior AEM Forms Developer @ AbbVie — 11/2025 – 01/2026 · **Frontend Developer @ UBS** — 08/2019 – 01/2020

- Enterprise AEM Forms delivery for AbbVie; UI and interactions for the UBS assets platform.

Autosync AS (via Senor d.o.o.) — Oslo / Belgrade

04/2018 – present · held in parallel

Agentic AI & Multi-Agent Orchestration Lead Architect — 02/2024 – present

- Structured multi-agent orchestration across company processes, cutting time-to-information by more than 40%.

Technical Lead — 04/2018 – 02/2024

- Led chatbot delivery and built the Kjapp parking app end to end on JavaScript, Node.js and MongoDB.

Republički fond za penzijsko i invalidsko osiguranje — Belgrade, Serbia

System Engineer · 05/2008 – 05/2018 — network infrastructure across 3,000+ workstations and 40+ servers, Active Directory, DNS, DHCP and Exchange, plus disaster recovery planning.

SELECTED PROJECTS

Figma-to-Code Agentic Pipeline — Skill pack turning Figma designs into production code with browser-based PASS/FAIL validation via Figma and Chrome DevTools MCP. Three explicit-invocation skills bound by one config file, each loading a known source and writing a defined artifact, so runs are reproducible and nothing is fabricated. Model-agnostic and portable. Public reference implementation of the workflow that cut development time 60–70%. github.com/skojic/aem-eds-figma-to-code

CERTIFICATIONS & EDUCATION

- Adobe Certified Professional — AEM Developer
- Technical education in Information Technologies — "New Belgrade", Belgrade, Serbia

Languages: Serbian (native) · English (professional working proficiency) · German (elementary)
