Srdjan Kojic

Engineering Lead · AI Agents, Integrations and Frontend

Berlin, Germany · srdjan.m.kojic@gmail.com · skojic.vercel.app · linkedin.com/in/srkki · github.com/skojic

PROFILE

Engineering lead who works between the client and the build. Eighteen years in technology, seven at Cognizant Netcentric delivering for Fortune 500 clients: presenting solutions and their business value to client executives in the meetings where budgets were decided, running client workshops, and translating business needs into delivery plans. For the past two years I have designed and shipped the agentic AI infrastructure now used daily by teams at Merck KGaA and Celonis, cutting delivery time on the Merck frontend workstream by 60–70%, and built seven production automation processes in UiPath for a bank-owned financial-services company. Before software, a decade running network infrastructure for a national pension fund, where I also started building web interfaces in 2016.

SKILLS

AI & Agentic Engineering Multi-agent orchestration · agent and skill design · explicit-invocation skill packs · LLM pipelines · LLM APIs (OpenAI, Anthropic) · Model Context Protocol (MCP) integrations — Jira, Figma, Confluence, browser · context engineering · model tiering · deterministic PASS/FAIL validation gates · model-agnostic pipeline design

Integration & Automation Robotic process automation (UiPath, in production) · national-registry data integration · invoicing and debt-collection workflows · Microsoft Dynamics integration · n8n workflows · Adobe Analytics data layers

Frontend & Architecture JavaScript (vanilla, ES6+) · TypeScript · HTML5 · CSS3 · design tokens · design systems · frontend architecture · component architecture · web performance · responsive and accessible UI

Frameworks, Platforms & Delivery React · Node.js · Next.js and PostgreSQL (personal project) · Adobe Experience Manager (AEM) · Adobe Edge Delivery Services (EDS) · AEM Forms · MongoDB · GitHub Actions CI/CD · SonarQube quality gates

Client & Leadership Executive solution presentations · requirements workshops · business analysis · scope and budget discussion · technical interviewing and hiring · mentoring

PROFESSIONAL EXPERIENCE

Cognizant Netcentric — Berlin, Germany

08/2019 – present

Progressed from AEM Developer to Technical Lead and Agentic AI Orchestration Architect.

Across engagements

- Presented proposed solutions and their business value to client executives in the meetings where budgets were decided, for Credit Suisse (POC), Lufthansa, Henkel, Celonis and Merck.
- Co-built two proof-of-concept solutions end to end with one colleague, against success criteria agreed with the client, and presented them as the technical lead in the client's decision meetings; the Lufthansa PoC was signed off and chosen for project development.
- Created the frontend technical interview process and ran the interviews; led onboarding design across every company location; spoke twice at the company's yearly summits.

Technical Lead | Agentic AI Orchestration Architect @ Merck KGaA — 01/2026 – present

- Designed the production multi-agent system now in daily use: an agent library with defined skills, an orchestration layer with strict invocation rules governing when each subagent runs, and pipelines coordinating them end to end.

- Built the Figma-to-Code agentic pipeline that cut development time 60–70% across markets, with deterministic source loading and PASS/FAIL browser validation so no values are invented. Case study: skojic.vercel.app/work/figma-to-code
- Led the frontend architecture for multi-market sites on Adobe Edge Delivery Services and AEM; architected a 5-layer design-token system spanning 1,000+ Figma tokens.
- Architected the Adobe Analytics data layer and ran the client requirement workshops behind it.

Technical Lead | Agentic AI Architect @ Celonis — 03/2025 – 11/2025

- Took over a task-force team with vague procedures and a review bottleneck; delivered ahead of deadline.
- Built the agentic AI pipeline for automated code review and wrote the frontend quality standards it enforced, with clear PASS/FAIL criteria; moved quality feedback ahead of human review with SonarQube and GitHub Actions.

Frontend Developer | MarTech Consultant @ Henkel — 01/2020 – 07/2024

- Built UI and interactions across multiple Henkel brands and markets over more than four years, and implemented an Adobe Analytics data-layer pipeline with event-driven granulation.
- Business analyst alongside engineering: client workshops, estimation, scope and budget.

Senior Frontend Developer @ BAT — 07/2024 – 03/2025 · **Senior AEM Forms Developer @ AbbVie** — 11/2025 – 01/2026 · **Frontend Developer @ UBS** — 08/2019 – 01/2020

- Webshop UI and interactions for the Japan and Canada markets (BAT); enterprise AEM Forms delivery (AbbVie); UI for the UBS assets platform.

AutoSync AS (via Senor d.o.o.) — Oslo / Belgrade

04/2018 – present · external engagement, held in parallel

Norway's largest AutoPASS toll service provider, a bank-owned financial-services company.

Agentic AI & Multi-Agent Orchestration Lead Architect — 02/2024 – present

- Structured multi-agent orchestration, cutting time-to-information by more than 40%.

Technical Lead — 04/2018 – 02/2024

- Designed and built seven UiPath automation processes in production: toll passages matched to Norwegian national-registry person and vehicle data, invoice calculation, debt collection, and datasets fed into Microsoft Dynamics for customer service.
- Built Kjapp, Senor's parking app, end to end on Node.js and MongoDB; led chatbot delivery.

Republički fond za penzijsko i invalidsko osiguranje — Belgrade, Serbia

System Engineer · 05/2008 – 05/2018 — network infrastructure across 3,000+ workstations and 40+ servers, Active Directory, Exchange and disaster recovery. From 2016, also built the frontends for internal process tools and the public pension-records site.

SELECTED PROJECTS

Figma-to-Code Agentic Pipeline — Skill pack turning Figma designs into production code with browser-based PASS/FAIL validation, decided by tested code rather than the model. Public reference implementation of the Merck workflow. github.com/skojic/aem-eds-figma-to-code

Secure File Vault (personal project) — Secure file-upload service in Next.js, TypeScript and PostgreSQL, built with an AI coding agent against decisions and security rules I set: argon2id hashing, database sessions, owner-or-admin access, streamed uploads. Workshop write-up: skojic.vercel.app/work/secure-file-vault

CERTIFICATIONS, EDUCATION & LANGUAGES

Adobe Certified Professional — AEM Developer · Technical education in IT, "New Belgrade", Belgrade

Languages: Serbian (native) · English (professional working proficiency) · German (elementary)
